

How Blancco's Erasure-as-a-Service (EaaS) Solution Can Help MSPs Achieve Data Sanitization in Remote or Onsite Desktop & Laptop Environments While Increasing Your Revenue Streams

Are you a Service Provider that provides desktop support in enterprise environments? PCs, laptops, and desktops are often spread throughout various locations or departments. This leads to disparate processes for erasing the data on these machines as required to follow IT Policies and Procedures. With Blancco's Erasure-as-a-Service (EaaS) solution, you can standardize the data sanitization process across your client's infrastructure to increase efficiency, mitigate risk, meet compliance requirements and reduce TCO when it comes time to erase specific files/data or reallocate, resell or recycle assets.

We provide EaaS solutions for:

- Standard MSPs that both offer Cloud and maintain Enterprises internal infrastructures
- MSPs that support Cloud Management Systems where desktop data is maintained
- System integrators

Blancco's EaaS solution offers key benefits across every step of the erasure process.

Deploy

- Deploy software via Windows PE, WIM installment, MSI, PXE boot, CD or USB.
- Employ organization-specific erasure policies via our configurable software.
- Access and automatically deploy erasure software across multiple locations from a centralized management console
- Integrate with Active Directory and existing ticketing systems.

Perform

- Perform API-driven erasure and reporting operations.
- Customize workflows for different types of technologies.
- Streamline data erasure regardless of operating system or manufacturer.
- Choose from 22 erasure standards to meet internal and external data sanitization requirements.
- Erase a wide range of data storage devices, from HDDs and standard SSDs to NVMe to PCIe-based SSDs, to removable media (USBs, SDs), VMs and files.

Track

- Store a tamper-proof Certificate of Erasure for every IT asset erased.
- Automatically send erasure reports to the Blancco Management Console.
- Choose from a variety of report types including CSV, XML or PDF; send these to clients, or track internally.
- Achieve compliance with local, national and global data security and privacy regulations and guidelines.
