

How Does Blanco Help Organizations Comply with ISO 27001?

What is ISO?

ISO (or the International Organization for Standardization) was founded in 1946 and is currently supported by 159 countries as the leading issuing body for international standards.

What is ISO 27001?

ISO/ 27001 is one section of ISO/IEC 27000, which is part of a growing group of ISO/IEC Information Security Management Systems (ISMS) standards. Specifically, ISO/IEC 27000 is an international standard entitled: Information technology — Security techniques — Information security management systems — Overview and vocabulary.

The standards ISO 27000 to ISO 27002 were developed in cooperation with the “International Electrotechnical Commission” (IEC), which is a leading global issuer of international standards in electronics and electronic technologies.

ISO 27001 and ISO 27002 specifically addresses the controls, control objectives and requirement and guidelines necessary for an organization to achieve adequate information security. Organizations that have been certified against ISO 27001 have been verified to be in fulfillment of internationally- known and accepted security standards. Most 27001 certificates are for a specific portion of a company (e.g., a cloud service offering or a managed service). Such a certification increases customer trust.

How Blanco Solutions Can Help

<p>A.11.2 Equipment A.11.2.7 Secure disposal or reuse of equipment <i>Control</i> All items of equipment containing storage media shall be verified to ensure that any sensitive data and licensed software has been removed or securely overwritten prior to disposal or re-use.</p>	<p>Blanco Technology Group is the de facto standard in data erasure.
